

Don't Forget Dynamic Presentations Include Great Audio!

You have a projector, computer and your own voice, that may be what you need to reach a room of 20 people, but what about 50, even 100? What about a loud trade show? How do you tie it all together and reach everyone with your message?

New technology is here to help! Plug your computer and projector into **AmpliVox's Wireless Voice Projector System**. This portable system includes wireless speakers and microphones that you can easily set up and cover a room up to 25,000 square feet! And the best part, it all compacts into a suitcase on rolling wheels.

You can play background music and talk at the same time! You can have a slide show or movie playing and everyone can hear it! Now, don't worry that you need a techie person with you to hook it all up, you don't. These systems nowadays are plug-and-play! Did you know the average sound output is 2-3 watt from a computer projector; you can increase that to 50 watts of stereo output with this system.

With this unit's ability to have two presenters wireless at the same time, you can have true audience participation and interaction with a second cordless mic! No messy cables will interfere with the presenter's ability to move around. Whether it is used outdoors or in training rooms, conference rooms, classrooms, or boardrooms, the **SW227 Wireless Voice Projector System** is the presentation solution for any presentation environment.

One of the great features of having your own sound system is you are never surprised by the sound system where you go. If you are a traveling trainer or teacher you know how some places can have unreliable equipment.

This **Voice Projector System** will provide rich, room filling sound. It can dramatically enhance presentations and communication with mixed media sound line-in for CD, tape player or computer projector.

You feel confident, you look great; you have rehearsed your presentation, now go out there and do a great job!
